"In this project Randall Bezanson examines judicial interpretations of free speech by means of a broad range of Supreme Court cases, arguing that over the past 15 years the Court has engaged in a truly revolutionary expansion of the reach of the free speech guarantee. The cases include the much-discussed Citizens United decision which granted the full measure of constitutional protection to speech by corporations; the Doe v. Reed case from Washington State that recognized the acts of signing petitions and voting in elections as acts of free speech; the Sumnum decision holding that the decision to select a monument for a public park and to reject another based on the government's disagreement with the monument's message is an act of government speech immunized from challenge by the First Amendment; and the Hurley and Dale cases that recognized free speech claims for messages and meanings that arose "out of thin air": speech without an author (a parade); and an author without a message (the Boy Scouts). As in earlier books on freedom of the press and of religion, Bezanson aims to arm the reader with the capacity to reach her or his own decision about whether the Court's conduct befitted the independent judicial branch and the consequences of its decisions for a representative democracy"-- DigiCat Publishing presents to you this special edition of "Sydney Smith" by George William Erskine Russell. Doreen (1917), the third C.J. Dennis' publication, extends on The Songs of the Sentimental Bloke narrative. Utilising the same idiomatic expression to depict 'the Bloke' and his 'little wife', these four tales in verse depicts the conflict that arises within the marriage unit, but ultimately emphasises their domestic bliss. A devastating and lyrical work of nonfiction, Young Men and Fire describes the events of August 5, 1949, when a crew of fifteen of the US Forest Service's elite airborne firefighters, the Smokejumpers, stepped into the sky above a remote forest fire in the Montana wilderness. Two hours after their jump, all but three of the men were dead or mortally burned. Haunted by these deaths for forty years, Norman Maclean puts together the scattered pieces of the Mann Gulch tragedy in Young Men and Fire, which won the National Book Critics Circle Award. Alongside Maclean's now-canonical A River Runs through It and Other Stories, Young Men and Fire is recognized today as a classic of the American West. This twenty-fifth anniversary edition of Maclean's later triumph—the last book he would write—includes a powerful new foreword by Timothy Egan, author of The Big Burn and The Worst Hard Time. As moving and profound as when it was first published, Young Men and Fire honors the literary legacy of a man who gave voice to an essential corner of the American soul. What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In A House To Remember, she explains why. A journal for Christian living for writing down your daily promises from the bible, and meditating on them. God reveals himself to us every day so as you reflect on what he is saying, growing in the lord each day. "This collection of essays brings together some of the finest pieces Hitchens published over the last two decades for the first time in one book, addressing with characteristic wit and erudition the subjects he is best known for, including: the case against God, faith and religious observance; the case for intervention in Iraq; indictments of towering political figures like Bill and Hillary Clinton, Tony Blair, and Henry Kissinger; and celebrations of the writers and thinkers whose work meant most to him"-- The First World War's centenary generated a mass of commemorative activity worldwide. Officially and unofficially; individually, collectively and commercially; locally, nationally and internationally, efforts were made to respond to the legacies of this vast conflict. This book explores some of these responses from areas previously tied to the British Empire, including Australia, Britain, Canada, India and New Zealand. Showcasing insights from historians of commemoration and heritage professionals it provides revealing insider and outsider perspectives of the centenary. How far did commemoration become celebration, and how merited were such responses? To what extent did the centenary serve wider social and political functions? Was it a time for new knowledge and understanding of the events of a century ago, for recovery of lost or marginalised voices, or for confirming existing clichés? And what can be learned from the experience of this centenary that might inform the approach to future commemorative activities? The contributors to this book grapple with these questions, coming to different answers and demonstrating the connections and disconnections between those involved in building

public knowledge of the 'war to end all wars'. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. "Stochastic Tools in Mathematics and Science" covers basic stochastic tools used in physics, chemistry, engineering and the life sciences. The topics covered include conditional expectations, stochastic processes, Brownian motion and its relation to partial differential equations, Langevin equations, the Liouville and Fokker-Planck equations, as well as Markov chain Monte Carlo algorithms, renormalization, basic statistical mechanics, and generalized Langevin equations and the Mori-Zwanzig formalism. The applications include sampling algorithms, data assimilation, prediction from partial data, spectral analysis, and turbulence. The book is based on lecture notes from a class that has attracted graduate and advanced undergraduate students from mathematics and from many other science departments at the University of California, Berkeley. Each chapter is followed by exercises. The book will be useful for scientists and engineers working in a wide range of fields and applications. For this new edition the material has been thoroughly reorganized and updated, and new sections on scaling, sampling, filtering and data assimilation, based on recent research, have been added. There are additional figures and exercises. Review of earlier edition: "This is an excellent concise textbook which can be used for self-study by graduate and advanced undergraduate students and as a recommended textbook for an introductory course on probabilistic tools in science."
