Survival of the Smartest Jan 20 2020 Drawing on the innovative concept of Organizational IQ and a study of companies in seventeen countries, *Survival of the Smartest* charts a course for managers to follow into the twenty first century. At the heart of the book is the authors' assessment tool of an organization's future health, which they call Organizational IQ. It measures a company's ability to quickly process information and make effective decisions. As industry clockspeeds accelerate everywhere, a high IQ has become a prerequisite for survival. Low IQ companies that the authors studied, on the other hand, have already vanished. Case studies from Hewlett-Packard, British Petroleum, Sun Microsystems and Chrysler, among others, illustrate how companies can improve their Organizational IQ. How did Hewlett-Packard become the dominant player in printing? How did British Petroleum transform itself from a stodgy behemoth into the most agile and competitive player in the oil industry? How did Chrysler rise from the brink of bankruptcy to become the auto industry's prized asset? In these companies, technology by itself only played a secondary role: to be successful, the entire organization had to become smarter. The authors show how key strategic decisions turned around these companies' Organizational IQ-and with it, their fortunes. A detailed company case study takes you in slow motion through the different steps you can take to improve the IQ of your own organization. *Survival of the Smartest* offers a rare blend of a coherent framework, in-depth company case

studies, a sound research base, and a detailed, step-by-step implementation example. Based on a landmark study of 164 organizations worldwide, conducted as part of a partnership between Stanford University, McKinsey & Company and the University of Augsburg, Organizational IQ is proving to be the acid test for the success or failure of companies around the world. Haim Mendelson, PhD, is the James Irwin Miller Professor of Information Systems at the Stanford Business School, leader of the Technology, Organizations, and Markets area at the Stanford Computer Industry Project, co-director of the Stanford Executive Program on Strategic Uses of Information Technology, and a consultant to leading high-tech firms and financial institutions. Johannes Ziegler, PhD, is the cofounder of Synesis Management Consulting. Synesis helps senior executives in leading high-tech companies, including Hewlett-Packard, Cisco, 3Com, and Intuit, to measure and improve their Organizational IQs. Before founding Synesis, Dr. Ziegler was a consultant with McKinsey & Company.

Designing Management Information Systems Sep 20 2022 Management information systems (MIS) produce the information that managers use to make important strategic decisions. This book covers the essential managerial skills that are necessary to design these systems. In contrast to other books on management information systems, this book takes a decidedly managerial perspective. It focuses on how managers perceive and respond to information, and on their need to use this information to make important decisions. The book considers how systems can be designed to combat 'information overload' experienced by managers, using such techniques as data aggregation and data visualization. Chapters provide an in-depth and practical consideration of these topics, focusing on the use of information systems for managerial decision making. *Designing Management Information Systems* covers the topics of key performance indicator monitoring, and of shortlisting and selecting alternatives from a range of options. These are managerial decisions for which MIS are particularly useful, and which managers face on a daily basis. This case approach offers a context for the many and varied problems that businesses face everyday, and how information system can provide solutions. These cases are expanded upon and made interactive with the help of the companion Web site that accompanies this text, and gives students the chance to learn more about the cases, delve deeper into more MIS topics and also provide opportunities for more hands on practice. A Paradigm for Management Information Systems Jul 18 2022

Management of Information Systems Mar 02 2021 Management functions were developed first as a systematic step to carry out management activities, while implementation of the information components followed as part of management elements. The authors point out that the use of the possibilities and advantages of quantitatively supported managerial decisions gives managers the ability to quantify the impacts of both technical (hard) and subjective (soft) constraints and improve managerial decision-making processes that would otherwise be based mostly on personal intuition and experience. To achieve the goals and benefits of excellent performance, it is necessary to design and develop integrated models that would coordinate management functions and information system components as an integrated process. These facts are presented in various case studies.
