finest examples of European  
craftsmanship are the clocks  
produced for the luxury trade  
in the eighteenth century. The  
J. Paul Getty Museum is  
fortunate to have in its  
decorative arts collection  
twenty clocks dating from  
around 1680 to 1798: eighteen  
produced in France and two in  
Germany. They demonstrate  
the extraordinary workmanship  
that went into both the design  
and execution of the cases and  
the intricate movements by  
which the clocks operated. In  
this handsome volume, each  
clock is pictured and discussed  
in detail, and each movement  
diagrammed and described. In

addition, biographies of the  
clockmakers and enamellers are  
included, as are indexes of the

- \* Do you own a clock that is special to you that has stopped working, perhaps a gift or a family heirloom? This book is for you.
- \* Do you like to tinker with mechanical things? This book is for you.
- \* Have you taken a clock apart but can't get it back together? This book is for you.
- \* Are you fascinated with clocks, have several you have bought but do not work? This book is for you.

Many times, the problem is simple to correct. Be bold. Take on your project. This book will hold your hand every step of the way and guide you to success. YOU CAN DO IT.

Why does an Anniversary Clock stop Working? Most likely, it is because the suspension spring

is broken. I will teach you how to replace it.

Often, the works are dirty, need oiling, or most likely both. When the clock stops, think of it as "the oil light is on." It's a "cry for help." Without oil, the metal parts grind on each other, causing severe wear and damage. Oil also attracts dust, making the oil "gummy" and adding drag to its operation until it can no longer overcome the friction. If a clock is oiled regularly [every three to five years], chances are you will only ever need to re-oil your clock. If the clock is allowed to run until it stops, the only sure way to service it is to remove the works from its case, dismantle the parts, clean, service, and put the movement back together with fresh oil and correct adjustment. DNA barcoding has become a well-accepted and popular tool for the identification of species and the detection of cryptic taxonomic diversity. As such, it has a tremendous potential for a wide variety of applications in taxonomy, agronomy, conservation biology, forensics etc. Therefore, several countries, institutions and organizations have launched DNA barcoding projects in the context of the international ?Consortium for the Barcode of Life? (CBOL) initiative. Also

Belgium has done so with the establishment of the FWO research community ?Belgian Network for DNA barcoding?. In 2012, this network organized the ?Third European Conference for the Barcode of Life? (ECBOL3) in Brussels. During this event a call was made to publish a collection of papers under the thematic title ?DNA barcoding: a practical tool for fundamental and applied biodiversity research?. With the financial support of the EC project ?ViBRANT? (Virtual Biodiversity Research and Access Network for Taxonomy), 21 papers were bundled to form this special ?ZooKeys? issue with the aim to present various applications, advantages and limitations of DNA barcoding. Hence, it is the editors? hope that this issue provides a modest, but timely, contribution to the already vast literature on DNA barcoding.
